HEDITALIA

We need a political Climate Action: The COP26 Paris Agreement is a clear signal that climate threats are serious. China Water Risk was on-ground in Paris, and talked with delegations on how to make the transition to a low-carbon economy. Despite only being a signatory, China has demonstrated how far it has come in terms of setting ambitious climate targets.

World leaders must act fast to avoid catastrophic consequences. The World Meteorological Organization has recently reported that 2020 was the hottest year on record, with temperatures 0.7°C above the long-term average. The Intergovernmental Panel on Climate Change (IPCC) has warned that without immediate and drastic action, we are heading towards a future of unbearable heatwaves and extreme weather events.

It is not too late to act. Environmental policies are being implemented around the world, and there are numerous opportunities for individuals and organizations to make a difference. The Paris Agreement is not just a promise, but a living, breathing agreement that requires ongoing commitment and action.

COP26: Some Key Issues for China

In October, China declared its commitment to peak carbon emissions by 2030 and carbon neutrality by 2060, a significant step forward in its climate action. However, there are still challenges to overcome, including industrial and transportation emissions.

Water and Climate Change

China is home to some of the world’s most vulnerable communities, and climate change is exacerbating these vulnerability. The Yangtze River, China’s longest river, is facing increased competition for water resources and rising temperatures, which are expected to continue to impact the river’s ecosystems and downstream communities.

Climate Finance: Who Pays?

The Paris Agreement was not just about setting targets, but also about how those targets would be financed. However, progress towards the financial goals of the agreement has been slow, with some countries failing to meet their financial commitments.
